Description

Forestry Mulchers for Excavators UMM/EX-UMM/EX/VT-UMM/EX/VT/HP The FAE forestry mulchers for the most powerful excavators. The UMM/EX - UMM/EX/VT - UMM/EX/VT/HP mulchers are great for mulching vegetation and trees with a max. diameter of 40 cm and are compatible with excavators from 20 to 36 t. Their hydraulic capacity ranges from 130 to 300 L/min. The UMM/EX models are recommended for managing and controlling vegetation in wooded areas, maintaining green spaces, and anywhere a large mulching capacity is required. The line offers two types of hydraulic motorsthe traditional fixed-displacement piston motor and the VT model with automatic variable displacement and increased torque for the most challenging tasks.The Poly Chain belt transmission guarantees optimum power transfer and reliability over time. The bolted counter blades work to finely mulch the material being processed and make maintenance easier. Its strong steel structural frame guarantees excellent reliability over time. The mulching chamber also features welded protections made of an anti-wear material. The large type C rotor that comes standard lets you attach different tooth models designated for various types of vegetation and uses. The rotor also comes with side teeth, which help keep the crushing chamber clean at all times.
