Description

2026 Freighter Road Train Skel – Built to Order The Freighter Road Train Skel is built for serious container work and wharf conditions where tare weight, strength and uptime matter. Designed and manufactured in Australia using Australian steel, Freighter skels are engineered for stability and payload efficiency. The low profile frame and wide spaced main beams help keep the centre of gravity down, and the modular design makes servicing and accident repairs simpler. Freighter has been building trailers locally since 1946 and continues to invest heavily into advanced manufacturing technology to lift build precision and consistency. Every unit is backed by Freighter Group's national dealership network for parts and service support across Australia, plus a 2 year manufacturer warranty. Typical Road Train Skel Specification ▪ Hendrickson HT airbag suspension ▪ 10/285 parallel bearing axles ▪ Polished aluminium outer and machined aluminium inner wheels ▪ Firestone 11R22.5 tyres ▪ Three way twistlocks ▪ Side loader pads ▪ 50mm Ringfeder coupling ▪ WABCO EBS braking system ▪ Reversing beeper ▪ Standard and heavy duty 7 pin electrical sockets ▪ Hubodometer fitted to centre axle ▪ Document holder on chassis ▪ Dual spare wheel carrier ▪ Blue plastic radius guards ▪ Combination long vehicle and road train signs Built to Order This skel is built to order and can be configured to suit your exact work, including container setup, coupling options, axle and suspension packages, electrical options, spare arrangements and wharf spec requirements. Pricing is subject to final specification and configuration at time of order. Photos are for illustration purposes only. 2026 Freighter Road Train Skel – Built to Order The Freighter Road Train Skel is built for serious container work and wharf conditions where tare weight, strength and uptime matter.
